

Directional speaker RL-1

The RL-1 is a powerful directional speaker that broadcasts audio messages or music straight to an audience within a distance up to 20 m. The audio level will stay almost constant, no matter if the listener is in 2 or 20 m distance to the speaker.

Directional speakers are common for exhibits in museums, because targeted areas can be broadcasted with audio, without interfering or disturbing surrounded objects and visitors. This gives your showroom an organized and well-arranged atmosphere. Surprising effects can come from directing the RL-1 onto sculptures or paintings making them come alive with sound, which grabs the visitor's attention.

The RL-1 was also designed for retail use. It will advertise and inform possible customer right in front of a shop, without disturbing shops beside. Inside the shop, costumers will get directed information for the product they are at. Special areas can be themed with fitting music or voices.

If requested, we offer a wall mount for the RL-1. This helps to target on a defined area and makes the mounting quick and easy.

Technical data

Max. range:	20 m
Impedance:	10k Ohm
Max. frequency range:	300 Hz – 18 kHz
Max. capacity:	38W MAX
Dispersion:	Angle: 6° at -3 dB (50% volume)
Sound:	Mono
Medium acoustic pressure (1.5kHz/2m):	89 dB
Size:	315 x 163 x 26 (L x W x D in mm)
Weight:	3.2 kg
Delivery content:	Directional speaker RL-1 Power supply
Optional:	Wall mount

Technical modifications and errors reserved.
