

RFID PICO-Module development kit

The PICO-Module development kit supports soft- and hardware engineers to integrate the PICO-Module in embedded hardware or Windows software. Prefabricated DLLs (Dynamic Link Libraries) and programming samples will simplify and speed up the development work.

Further information

Delivery content: PICO-Module board with soldered connector
Coil antenna diameter 60 mm
Interface board RS232 <-> PICO-Module
230 Volt power supply, EURO norm
Windows DLL with programming samples
Online documentation DLL (English language)
Online PICO-Module Data Sheet
3 pieces sample card with HITAG1/S tag
Serial adapter cable RS232
CD-ROM
Packaging: Paper box

Technical modifications and errors reserved.
